

Follow up on MC Request from Higgs/SM Forum

Joey Huston and Bruce Mellado

US ATLAS RAC Meeting, 05/17/07

- ✚ At the US ATLAS RAC on 01/31/07 Joey and BM made a request for ~3.5M events to complement central production efforts
 - Samples to be used primarily for $H \rightarrow \gamma\gamma, \tau\tau$ and $Z/W + \text{jets}$ csc notes, with applications to other notes
- ✚ Worked with Pavel, Kaushik and Jim to setup a mechanism for submission to OSG outside the quotas defined by Central Production
 - Regional production was delayed further due to G4 bug
- ✚ At this point US ATLAS regional production is going very well; concentrated on producing simulation so far
 - Setup in Madison almost ready to start massive production. Many thanks to Kaushik et al.

Proposal for $H \rightarrow \gamma\gamma$

- ✚ On Wednesday the editors of the Higgs WG CSC notes had a meeting to address issues of MC production. L.Carminati and BM, as the CSC $H \rightarrow \gamma\gamma$ editors, made the following proposal in coordination with the Higgs WG convenors
 - Request signal processes to Central Production (~300K events). Make sure that at least all the final states with $M_H=120$ GeV are produced with pile-up centrally
 - Assign 1M to Lyon (photon/jet 8095, 8096, for instance)
 - Assign the rest of the events (~3M) to OSG and Wisconsin
 - ❖ US ATLAS Resource Allocation Committee already approved 2M. Request of an additional 1M
